

THE SCENE AI / CREATOR OS

START HERE

THE SCENE OS

Your complete workflow from character idea to posted episode.

CREATE THE CHARACTER. DIRECT THE SCENE. BUILD THE WORLD.

THE
SCENE AI

CREATE CINEMATIC CONTENT.
BUILD YOUR DIGITAL WORLD.

How to use this system

The SCENE AI is not a pile of random prompts. It is a connected creator operating system. Complete the modules in order the first time. After your character is locked, return to the modules you need for each new episode.

STEP	MODULE	RESULT
1	Character First	Choose who the audience will follow.
2	Prompt Pack	Build the MASTER, DNA sheet, body lock and expression library.
3	Outfit + Hair Systems	Choose the episode look without changing identity.
4	Reference Blueprint	Assign a job to every uploaded image.
5	The SCENE Method	Direct Story, Cast, Environment, Now Build and End Stamp.
6	Continuity System	Make Part 2 look like it begins one second after Part 1.
7	Camera Bible	Place a believable camera and direct its movement.
8	Realism Check	Catch the details that make AI look fake.
9	Generate, Post, Review	Publish, study audience response and build the next episode.
THE ONE RULE Character first. Then story before look. Lock the person once. For every episode, decide the situation before the wardrobe, location or visual effect.		

What is included
