

THE SCENE AI / CREATOR OS

START HERE

THE SCENE OS

Your full plan, from character idea to posted episode.

CREATE THE CHARACTER. DIRECT THE SCENE. BUILD THE WORLD.

PART 01 OF 19

THE
SCENE AI

CREATE CINEMATIC CONTENT.
BUILD YOUR DIGITAL WORLD.

How to use this system

The SCENE AI is not a pile of random prompts. It is one connected system for creators. Do the modules in order the first time. Once your character is locked in, come back to just the modules you need for each new episode.

STEP	MODULE	RESULT
1	Character First	Choose who the audience will follow.
2	Prompt Pack	Build the MASTER, DNA sheet, body lock and expression library.
3	Outfit + Hair Systems	Pick the look for each episode without changing who the character is.
4	Reference Blueprint	Give every image you upload a clear job.
5	The SCENE Method	Direct Story, Cast, Environment, Now Build and End Stamp.
6	Continuity System	Make Part 2 look like it begins one second after Part 1.
7	Camera Bible	Put the camera in a believable spot and control how it moves.
8	Realism Check	Catch the details that make AI look fake.
9	Generate, Post, Review	Post your video, study how people respond, then build the next episode.

THE ONE RULE

Character first. Then story before look. Lock in your person one time. For every episode, decide what happens before you pick the clothes, the place or the visual effects.

Your road map

START HERE**1****CHARACTER FIRST**

MODULE 01

Pick who your audience will follow.

2**PROMPT PACK**

MODULE 02

Make your MASTER face and DNA photos.

3**OUTFIT + HAIR**

MODULES 03 + 04

Pick the look for this episode.

4**REFERENCE BLUEPRINT**

MODULE 05

Give every photo you upload one job.

5**THE SCENE METHOD**

MODULE 06

Direct the scene: story, cast, place.

6**CONTINUITY SYSTEM**

MODULE 07

Make Part 2 match Part 1.

7**CAMERA BIBLE**

MODULE 08

Put the camera in a spot that makes sense.

8**REALISM CHECK**

MODULE 09

Catch anything that looks fake.

9**GENERATE + POST + REVIEW**

MODULES 10 - 12

Post it. See what works. Repeat.

POST IT

What is included

- › Module 01 — Character First
- › Module 02 — The Prompt Pack

- › Module 03B — Men's Outfit Pack
- › Module 04A — Women's Hair Pack
- › Module 04B — Men's Hair + Grooming Pack
- › Module 05 — The Reference Blueprint
- › Module 06 — The SCENE Method
- › Module 07 — The Continuity System
- › Module 08 — Camera Bible
- › Module 09 — Realism Check
- › Module 10 — The SCENE Library
- › Module 11 — The Prompt Vault
- › Module 12 — The Viral Story Blueprint
- › Bonus 01 — Hook Vault
- › Bonus 02 — Caption Vault
- › Bonus 03 — Comment Blueprint
- › Bonus 04 — The SCENE Files

Your tool kit — the apps you need

You need four tools: one that writes and stores your prompts, one that makes photos, one that turns photos into video, and one that edits. The system works in ANY apps that can do these jobs. This is the working stack:

THE JOB	TOOLS	TIP
Write and store your prompts	ChatGPT, Claude	Save your master template there. Every episode is a small edit.

THE JOB	TOOLS	TIP
Make the face, photos and poses	Nano Banana Pro, Higgsfield, Midjourney	Generate your MASTER here, plus extra angles and poses.
Turn it all into video	Seedance 2.0, Higgsfield, Kling, Veo	It MUST accept multiple reference images at once.
Edit, captions and sound	CapCut, InShot	CapCut is free and enough to start.

THE PIPELINE — EVERY EPISODE MOVES LEFT TO RIGHT

ChatGPT writes the prompt Nano Banana Pro makes the photos paste it ALL into Seedance 2.0 with every reference attached CapCut finishes it.

The bigger your scenes get, the more reference images you attach at once — one for identity, one for hair, one for the outfit, one for each location. The full multi-reference master template is in Module 11.

- › Pick ONE tool per job, learn it once, and stay there — switching apps every week is how characters drift.
- › Free versions are fine to start. Upgrade when episodes are working.
- › Upload your MASTER photo into every tool, every time.
- › Keep the SAME tools for a whole series.

Tools change fast. If a new app comes out, the system still works — the prompts and the method do not change.
