

THE SCENE AI / CREATOR OS

MODULE 03

THE SCENE METHOD

The connected creative-direction framework for every episode.

CREATE THE CHARACTER. DIRECT THE SCENE. BUILD THE WORLD.

CREATE CINEMATIC CONTENT. BUILD YOUR DIGITAL WORLD.

What this is

A system for making short, cinematic AI-generated story drops that stop the scroll, build a recognizable world and move the audience toward a next episode, conversation, offer, booking link, product or brand opportunity.

THE ONE RULE CHARACTER FIRST. THEN STORY BEFORE LOOK. YOUR MASTER AND DNA SHEET SHOULD ALREADY BE COMPLETE FROM MODULES 01 AND 02.		
LETTER	STAGE	DIRECTOR DECISION
S	STORY	Write the situation beat by beat. Open on the sharpest moment. Decide the hook, action, reaction, emotional change and cliffhanger before choosing the outfit.
C	CAST	Place the locked lead character into the moment. Add supporting people only when they create tension, information, emotion or movement. Save a MASTER for every recurring person.
E	ENVIRONMENT	Build the world the story requires: location, time, lighting, weather, crowd, props, products, signage, sound and background behavior.
N	NOW BUILD	Assign each reference a job. Specify camera, placement, framing, movement, timing, dialogue, blocking, realism, continuity and negative controls. Generate in story order.
E	END STAMP	Close on recognition, action or continuation. Use a signature line, unanswered question, reaction, CTA, reveal or next-episode setup.

S – STORY

Write the situation beat by beat. Open on the sharpest moment. Decide the hook, action, reaction, emotional change and cliffhanger before choosing the outfit.

- › What is already happening in frame one?
- › What should the viewer wonder immediately?
- › What changes before the scene ends?
- › What one action and one reaction must land?

- › Why is another episode needed?

C – CAST

Place the locked lead character into the moment. Add supporting people only when they create tension, information, emotion or movement. Save a MASTER for every recurring person.

- › Lead identity reference
- › Supporting character identity reference
- › Relationship and power dynamic
- › Who speaks, reacts, observes and exits
- › Beginning and ending emotional state

E – ENVIRONMENT

Build the world the story requires: location, time, lighting, weather, crowd, props, products, signage, sound and background behavior.

- › Exact location and time
- › Lighting source and weather
- › Background guests and natural behavior
- › Products and props that must stay consistent
- › Ambient sound and believable details

N – NOW BUILD

Assign each reference a job. Specify camera, placement, framing, movement, timing, dialogue, blocking, realism, continuity and negative controls. Generate in story order.

- › Open Module 04: Reference Blueprint
- › Open Module 07: Camera Bible
- › Use Module 05: Continuity System for Part 2+
- › Run Module 08: Realism Check before generating
- › Use the detailed scene templates in Module 13: Prompt Vault

E – END STAMP

Close on recognition, action or continuation. Use a signature line, unanswered question, reaction, CTA, reveal or next-episode setup.

- › Signature stamp
- › Caption CTA
- › Pinned comment
- › Brand tag or product
- › Cliffhanger or next-scene tease

15-second timing map

TIME	JOB
0-3 sec	Hook: the strongest image, line, surprise or unanswered question.
3-6 sec	Context: reveal enough to understand the situation.
6-10 sec	Action: the character does, receives, discovers or decides something.
10-13 sec	Reaction: give the emotion enough time to register.
13-15 sec	End stamp: close, convert or force the next episode.

Non-negotiables

- › The hook is visible in frame one.
- › Vertical 9:16 unless the platform requires another format.
- › One primary action per short clip.
- › Dialogue fits real-world timing.
- › The camera exists in a believable physical position.
- › Every reference has an assigned job.
- › Identity, product and environment continuity are explicitly locked.
- › The scene contains tension, curiosity or emotional change.
- › The ending creates recognition, action or continuation.

NEXT

Use Module 04 to map references, Module 07 to select camera language and Module 13 to build the production prompt.
